

From reactive to proactive:

How Techgeek accelerated root cause analysis with ManageEngine Site24x7

About

Techgeek is a professional IT integrator that helps businesses manage and optimize their IT infrastructure. By providing outsourced technical expertise for teams without full in-house IT support, Techgeek streamlines daily operations, strengthens system reliability, and minimizes downtime through faster issue resolution.

Location

Canóvanas, Puerto Rico

Industry

IT services

Faster root cause identification

Less time wasted on manual investigation

Improved operational efficiency as a solo MSP

Quicker issue resolution for clients

The challenge: Reactive troubleshooting that slowed client support

Before Site24x7, Techgeek lacked a centralized way to monitor system health across its clients' environments. When an issue surfaced, there was no single place to verify what went wrong or where it started. Troubleshooting meant digging through logs, checking individual servers, and piecing together clues manually. This made root cause analysis slow, inconsistent, and heavily dependent on time-consuming research—ultimately delaying resolutions and impacting service quality.

Without a centralized monitoring platform, every issue required manual investigation. It took longer to identify the root cause, and that meant slower resolutions for our clients.

Ariel Aponte,
founder of Techgeek

The need for deep visibility and diagnostic detail

As an IT integrator managing multiple client environments, surface-level metrics weren't enough. Many remote monitoring systems (RMMs) offered basic visibility, but lacked the granularity Techgeek needed to drill deep into system performance, analyze detailed metrics, and provide meaningful insight during troubleshooting. For Ariel Aponte, founder of Techgeek, the ability to research issues directly within the platform, not outside of it was a defining requirement.

Site24x7 stood out by delivering that capability in a single platform. With detailed metrics, built-in event log monitoring, and intuitive drill-down capabilities, the solution gave Techgeek the visibility it needed to quickly trace issues back to their source and resolve them with confidence.

Other RMMs don't have the level of detail that Site24x7 has. You can go deep, analyze metrics, monitor event logs, and really investigate what's happening utilizing Site24x7. Not every platform can do that.

Ariel Aponte,
founder of Techgeek

The solution: Deep diagnostics without guesswork

For Aponte, what set Site24x7 apart was the solution's diagnostic depth. From a single console, Techgeek could monitor system health, track performance metrics, and respond to incidents proactively, without manually logging into each server.

With the help of Site24x7, Techgeek is able to:

- ↗ Drill down into detailed system metrics
- ↗ Analyze event logs directly within the interface
- ↗ Review historical performance data
- ↗ Investigate anomalies without switching tools

The impact: Faster RCA, stronger service delivery

With Site24x7 in place, Techgeek transformed the way issues are identified and resolved. The most significant business benefit however has been accelerated root cause analysis (RCA). With a wide variety of monitoring options, Techgeek now has the flexibility to monitor diverse client environments without switching tools. The intuitive visuals within the console and the overall performance of the platform further enhance day-to-day usability, making monitoring both powerful and efficient.

Before Site24x7, troubleshooting meant investigating blindly, reviewing logs manually, remotely accessing servers, and trying to piece everything together. Now with everything centralized in one console, we can quickly pinpoint the root cause of an issue and resolve it much faster. It has completely changed the way we approach incident response.

Ariel Aponte

founder of Techgeek

By reducing the time spent researching and diagnosing issues, Site24x7 directly saves valuable hours, allowing Techgeek to focus more on proactive service rather than reactive troubleshooting.

About ManageEngine Site24x7

ManageEngine Site24x7 is a SaaS-based, full-stack observability platform that delivers unified visibility into modern, distributed IT environments. Built for DevOps, SREs, IT operations, and platform engineering teams, it offers deep insights across metrics, logs, traces, and real-user data—all through a single, intuitive dashboard. Supporting over 1,000 technologies, including public clouds, containers, middle-tier applications, and network devices, Site24x7 helps more than 13,000 organizations worldwide ensure uptime, performance, and digital resilience. Its AIOps capabilities reduce alert noise, uncover anomalies faster, and accelerate resolution. Mobile apps and multi-channel notifications keep teams connected and responsive wherever they are.
